PART-A

1) Pumping lemma for Regular languages:-

Pumping lemma is used for pumping (generating) multiple substring from the input given string.

In other words, pumping lemma is a break of large input string into ~~m~~ several substrings.

2) Deterministic Push Down Automata.

$M = \{Q, \Sigma, \Gamma, \delta, q_0, Z, F\}$

* For every q in Q and Z in Γ ~~whatever~~ whenever (q, ϵ, Z) is non empty, (q, a, Z) is empty for all a in Σ
* For no q in Q and Z in Γ, a in $\Sigma \cup \{\epsilon\}$ does (q, a, Z) atleast have more element.

Page No :

3) Different ~~Techni~~ Techniques for Turning Machine Construction:-

There are five techniques for Turning Machine construction

* Storage of finite control
* Multiple track
* Checking off symbol
* State change.

4) Turning Machine :-

Turning Machine contain

* Finite control
* Infinite tape
* Tape head.

Specification of Turning Machine:

Each tape is divided into cells. The tape has infinite to the right.

Each cell of the tape contain only one symbol.

The tape head can move in both direction in the cell.

→ finite control

a_1	a_2	...	a_i	B	B

Page No :

5) Instantaneous description of turning Machine:

Instantaneous description of turning machine is defined as

$\alpha_1 q \alpha_2$

where q is the current state of M

α_1 & α_2 is the string

6) Multitape Turning Machine:

- Multitape turning Machine contain finite control with K tapes and K tape heads
- The type of tape has infinite in both side.
- The tape head can move independently on both side.

Turning Machine follows

- Changes the state
- Change the symbol scanned by the tape head
- Either move in left or right Direction.

Page No :

B	B	a_1	a_2	... a_n	B	B

7) Recursively Enumerable language:

The language accepted by turning machine is called Recursively ~~Enum~~ Enumerable language.

Recursively Enumerable set: It consists of regular languages and context-free languages. But not all the languages are accepted by Turning Machine.

Recursive set: Recursive set is the subset of Recursively Enumerable set. ~~The~~ Any language is accepted by turning Machine.

8) Universal turning Machine:

It shows the problem in undesirable.

The problem is "Does the turning Machine M accept the input w?"

Both M and w are parameters. Formalizing the problem, w should be required to have (0,1) where M have the alphabet (0,1,B). This is called Universal turning Machine.

9) Class NP problem:

The problem can be solved non-deterministic polynomial language by non deterministic Turning Machine.

Eg: Undesirable problem.

10) Rice theorem:

If the post correspondance is desirable, then MPCP is also desirable.

PART-C.

16) a) Prove that:

i) $L = \{a^n b^n \mid n \geq 0\}$ is not regular.

Proof:

Given $L = \{a^n b^n \mid n \geq 0\}$

Let us consider L is regular.

Pumping length $= p$.

The string of the L

~~$S = a^p b^p$~~

$S = a^p b^p$.

S is going to separate into 3 parts

$S = xyz$.

Let us put $p = 7$

$S = a^7 b^7$

$=$ aaaaaaabbbbbbb.

Case 1 :

y be in 'a' part

$$\underbrace{aa}_{x}\underbrace{aaaaa}_{y}\underbrace{bbbbbbb}_{z}$$

Case 2 :

y be in both 'a' and 'b' part

$$\underbrace{aaaa}_{x}\underbrace{aaabb}_{y}\underbrace{bbbbb}_{z}$$

Case 3 :

y be in 'b' part

$$\underbrace{aaaaaaa}_{x}\underbrace{bb}_{y}\underbrace{bbbbb}_{z}$$

Now we writ

xy^iz.

We have to prove $xy^iz \notin L$ for any value of i.

Put $i = 2$.

Case 1 :

$xy^iz = xy^2z$

$= aaaaaaaaaaaa\ bbbbbbb$

Case 2 :

$xy^iz = xy^2z$

$= aaaa\ aaaaaa\ bbbb\ bbbbb$

Case 3 :

$xy^iz = xy^2z$

$= aaaaaaa\ bbbb\ bbbbb$.

Check under the given condition.

$|xy| \le p$.

Case 1 : $|xy| \le p$

$12 \le 7$ not satisfied.

Case 2 : $|xy| \le p$

$13 \le 7$ not satisfied

Case 2 : $|xy| \le p$

$11 \le p$ not satisfied.

Page No :

Put $i = 3$.

Case 1:

$xy^iz = xy^3z$

$= aaaaaaaaaaaaaaaaa\ bbbbbbb.$

Case 2:

$xy^iz = xy^3z$

$= aaaa\ aaaaaaaaa\ bbbbbb\ bbbbb$

Case 3:

$xy^iz = xy^3z$

$= aaaaaaa\ bbbbbb\ bbbbb.$

Check under the given condition.

$|xy| \leq p$

Case 1: $|xy| \leq p$

$17 \leq 7$ not satisfied

Case 2: $|xy| \leq p$

$19 \leq 7$ not satisfied

Case 3: $|xy| \leq p$

$13 \leq 7$ not satisfied.

Page No :

It is concluded that it is not pumped.

Our assumption is wrong.

$\therefore$ L is not regular

Hence Proved.

ii) $L = \{a^n b^n c^n \mid n > 0\}$ is not a CFL.

Proof:

Given. $L = \{a^n b^n c^n \mid n > 0\}$

According to pumping lemma we write $L = uvwxy$

L is going to separate into 5 parts.

$n = 1$ $L = \{ab\}$

$n = 2$ $L = \{aabb\}$

$n = 3$ $L = \{aaabbb\}$

$L = \{ab, aabb, aaabbb, \ldots\}$

Page No :

Consider $L = aaaabbbb$.

$$\underset{u}{a}\ \underbrace{a\,a\,a}_{v}\ \underset{w}{b}\ \underbrace{b\,b}_{x}\ \underset{y}{b}$$

$u = a$, $v = aaa$, $w = ab$, $x = bb$, $y = b$.

Checking conditions:

1) $|vx| \neq \epsilon$

v has 3 value

x has 2 value.

$\therefore 5 \neq \epsilon \rightarrow$ satisfied.

2) $|vwx| \leq m$

$6 \leq 8 \rightarrow$ satisfied.

It satisfy both condition.
then we write
$L = uv^k wx^k y$.

$k = 1$

$uv^k wx^k y = uvwxy$

Page No :

$= aaaabbbb \in L$.

$= a^4 b^4$

$k = 2$

$uv^k wx^k y = uv^2 wx^2 y$

$= aaaaaaabbbbbb$

$= a^7 b^6 \notin L$.

$k = 3$.

$uv^k wx^k y = uv^3 wx^3 y$

$= aaaaaaaaaabbbbbbbb \notin L$.

$= a^{10} b^8$

k=2 is not belongs to L.

$\therefore$ L is not a context free language.

Hence proved.

12/8

Page No :

PART-A

11) b) PDA to CFG.

Construct a CFG G

$G = \{V, T, P, S\}$

where V → set of non terminal
T → set of terminal
P → set of production in the form of $A \to \alpha$.
where A → set of Terminals
α → string of both terminal and non terminal
S → starting symbol.

Gn:- $M = (\{q_0, q_1\}, \{0, 1\}\ \{x, z_0\}, \delta, q_0, z_0, \phi)$

$$\boxed{\begin{aligned} V = \{ & S, \{q_0, x, q_0\} \{q_0, x, q_1\} \{q_1, x, q_0\} \\ & \{q_1, x, q_1\} \{q_0, z_0, z_0\} \{q_0, z_0, q_1\} \\ & \{q_1, z_0, q_0\} \{q_1, z_0, q_1\} \}. \end{aligned}}$$

Page No :

T = same as the ~~sty~~ input given in PDA

$\boxed{T = \{0, 1\}}$

S → [initial state, initial stack symbol, state]

state → $\{q_0, q_1\}$

initial state → q_0

initial stack symbol → z_0

$$\boxed{\begin{aligned} & S \to [q_0, z_0, q_0] \\ & S \to [q_0, z_0, q_1] \end{aligned}}$$

Set of Production:-

i) $\delta(q_0, 0, z_0) = \delta(q_0, xz_0)$

eliminate $[q_0, z_0, q_0] \to 0\,[q_0, x, q_0]\,[q_0, z_0, q_0]$

eliminate $[q_0, z_0, q_0] \to 0\,[q_0, x, q_1]\,[q_1, z_0, q_0]$

eliminate $[q_0, z_0, q_1] \to 0\,[q_0, x, q_0]\,[q_0, z_0, q_1]$

$[q_0, z_0, q_1] \to 0\,[q_0, x, q_1]\,[q_1, z_0, q_1]$

Page No :

2) $\delta(q_0, 0, x) = \delta(q_0, xx)$

eliminate $[q_0, x, q_0] \rightarrow 0\,[q_0, x, q_0]\,[q_0, x, q_0]$

eliminate $[q_0, x, q_0] \rightarrow 0\,[q_0, x, q_1]\,[q_1, x, q_0]$

eliminate $[q_0, x, q_1] \rightarrow 0\,[q_0, x, q_0]\,[q_0, x, q_1]$

$[q_0, x, q_1] \rightarrow 0\,[q_0, x, q_1]\,[q_1, x, q_1]$

3) $\delta(q_0, 1, x) = \delta(q_1, \epsilon)$

$[q_0, x, q_1] \rightarrow 1$

4) $\delta(q_1, 1, x) = \delta(q_1, \epsilon)$

$[q_1, x, q_1] \rightarrow 1$

5) $\delta(q_1, \epsilon, x) = \delta(q_1, \epsilon)$

$[q_1, x, q_1] \rightarrow \epsilon$

6) $\delta(q_1, \epsilon, Z_0) = \delta(q_1, \epsilon)$

$[q_1, Z_0, q_1] \rightarrow \epsilon$

Check the non terminal of V is present in the left side of production.

$\{q_1, x, q_0\}$ & $\{q_1, Z_0, q_0\}$ is not present in the set of production ~~so, eliminate the production.~~

Check these two in the right side of the production and eliminate it.

Similar terms in both left and right of the production is eliminate.

Set of production P =

$[q_0, x, q_1] \rightarrow 0\,[q_0, x, q_1]\,[q_1, x, q_1]$

$[q_0, Z_0, q_1] \rightarrow 0\,[q_0, x, q_1]\,[q_1, Z_0, q_1]$

$[q_0, x, q_1] \rightarrow 1$

$[q_1, x, q_1] \rightarrow 1$

$[q_1, x, q_1] \rightarrow \epsilon$

$[q_1, Z_0, q_1] \rightarrow \epsilon$

Page No :

14) a) Closure properties of recursive and recursively enumerable languages:-

Theorem 1 :-

The complement of L is recursive, if L is recursive.

Proof:-

Let L be the language accepted by turning Machine M.

Construct M' from M, if M is entered into the final state of input w, then M' is entered without accepting.

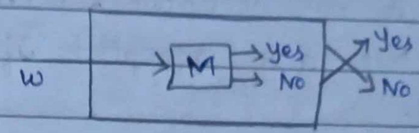
Likewise if M' is entered into the final state, then M is entered without accepting.

Since both are accepted, M' is an ~~a~~ algorithm.

Therefore L is recursive, where complement of L is also recursive.

Hence proved.

Page No :



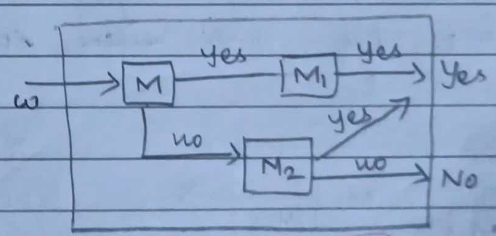
Theorem of 2 :-

i) The union of ~~two~~ recursive is recursive.

ii) The union of recursively Enumerable is recursively Enumerable.

Proof:-

i)



Let L1 and L2 be the languages accepted by M.

Construct M, first M stimulates M1

If M1 is accepted, then M accepted

Page No :

If M_1 is not accepted, then M stimulates M_2 and accepted iff M_2 is accepted.

M accept any of the language $L_1 \cup L_2$.

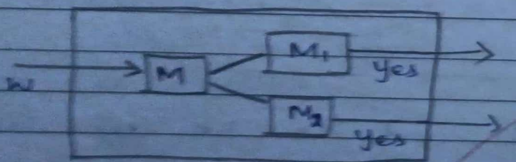
∴ The union of recursive is recursive.

Hence proved.

ii) The above construction is not applicable for recursively Enumerable

M_1 may not accepted.

So, M is simultaneously stimulate M_1 and M_2 into two ~~differ~~ separate tapes.



∴ The union of recursively enumerable is recursively ~~are~~ enumerable.

Hence proved.

Theorem 2:

If the language L and $\bar{L}$ is recursively enumerable then L is recursive.

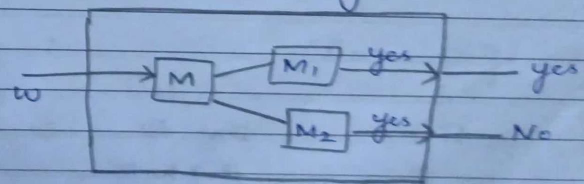
Proof:

Let M_1 and M_2 accept the language L and $\bar{L}$ respectively.

If M accepts the input w if M_1 accepts w and reject w if M_2 accepts w.

Since w is in either on L and $\bar{L}$, we know that any of the M_1 or M_2 is going to accepted.

M says only whether it is yes or no and not say both.



Page No :

∴ If the language L and its complement $\bar{L}$ is recursively enumerable, then L is recursive.

Hence Proved.

15) b) Gn:- $M = \{\{q_1, q_2, q_3\}, \overset{\Sigma}{\{0, 1, B\}}\ \overset{\Gamma}{\{0, 1\}}, \delta, q_1, B, \{q_3\}\}$

	0	1	B
q_1	$(q_2, 1, R)$	$(q_2, 0, L)$	$(q_2, 1, L)$
q_2	$(q_3, 0, L)$	$(q_1, 0, R)$	$(q_2, 0, R)$
q_3	–	–	–

Making first pair:-

List A	List B
#	#qw#
